<sup>i</sup> Pursuant to CCPA § 1798.121(d), sensitive personal information that is collected or processed without the purpose of inferring characteristics about a consumer is not subject to the right to limit use and disclosure of sensitive personal information and shall be treated as personal information.

<sup>ii</sup> Pursuant to Colorado Privacy Act Rule 6.10, controllers also must obtain consent to process sensitive data inferences, which are inferences made by a controller based on personal data, alone or in combination with other data, which are used to indicate an individual's racial or ethnic origin; religious beliefs; mental or physical health condition or diagnosis; sex life or sexual orientation; or citizenship or citizenship status.

<sup>iii</sup> California's definition does not state that genetic data must be used for purposes of uniquely identifying an individual.

<sup>iv</sup> Delaware, Maryland, and Oregon's definitions of sensitive data do not state that biometric data must be used to identify individuals. However, this requirement is found in each law's definition of biometric data.

<sup>v</sup> In its 2025 rulemaking, the California Privacy Protection Agency added this as a category of sensitive personal information. Specifically, the regulation states: "Personal information of consumers that the business has actual knowledge are less than 16 years of age. A business that willfully disregards the consumer's age shall be deemed to have had actual knowledge of the consumer's age."

<sup>vi</sup> "Biological data" means data generated by the technological processing, measurement, or analysis of an individual's biological, genetic, biochemical, physiological, or neural properties, compositions, or activities or of an individual's body or bodily functions, which data is used or intended to be used, singly or in combination with other personal data, for identification purposes. "Biological data" includes neural data.
